To be or not to be... sustainable

Being organic has ceased to be a differentiating value in the European fruit and vegetables production. Green certificates are got from anywhere in the world to join the new wave of consumption. Today, the challenge is to achieve and prove to be sustainable within the organic framework. Providing a product within practices environmentally friendly with the environment, the soil, the water, the social environment and, in this aspect, all companies cannot be present. Many companies have joined the organic flow for being a profitable business rather than be a proposal for the future for development of the environment. For this reason, many

traders try not to show their organic side except for their customers and the market. Spain is one of the major players as a supplier of organic fruit and vegetables, but remains far from its commitment to organic values, since the majority who have joined in this trend are seeking the economic benefit more than the environmental benefit. As explains the guru David del Pino, the important and difficult nowadays is prove to be sustainable rather than organic. There is a lot of organic in the industry and not so much sustainable.

Rafael I. Losilla
Director F&H magazine

Rijk Zwaan es una de las firmas de semillas líderes en horticolas para orgánico gracias a contemplar un amplio rango de variedades de la mano de un fuerte desarrollo en I+D en la búsqueda de resistencias al Oidio, Nemátodos y resistencias naturales como el 'blueleaf' en pepino.

La entrega de los genetistas de Rijk Zwaan en la búsqueda de soluciones a los problemas fúngicos le da a esta empresa un valor diferenciador y competitivo de cara a los cultivos ecológicos en pepino, pimiento y tomate con respecto a las variedades de otras firmas de semillas.

La firma cuenta con seis variedades líderes en pepino largo para cultivos ecológicos en todos los trasplantes. Pradera RZ, Manglar

RZ y Arrecife RZ en temprano; Litoral RZ en medio y Valle RZ y Marítimo RZ en tardío. La apuesta de Rijk Zwaan por el orgánico es decidida y amplia, ya que es capaz de completar todas las fechas de trasplante para la zona del Sur de España en pepino largo, al igual que en tomate rama y en varias líneas de hoja. Propiedades naturales como la del 'blueleaf' permite que las variedades de pepino cifradas anteriormente sean altamente competitivas en cultivos orgánicos por solucionar el problema del Oidio, la enfermedad más complicada de combatir en ecológico en pepino largo. Es un ejemplo directo de las prestaciones que ofrece Rijk Zwaan para el segmento ecológico.

Pimiento

Rijk Zwaan también es altamente competitiva en pimiento California para cultivos ecológicos, gracias a disponer de cuatro variedades con resistencias a Oídio y Nemátodos. Nirvin RZ, Sibeliuz RZ, Percusion RZ y Acustico RZ conforman un 'pack' de variedades en California para diferentes trasplantes muy competitivos. De nuevo, Rijk Zwaan transmite amplitud de soluciones, ya que el portafolio de Rijk Zwaan en pimiento ofrece muchas posibilidades y diferentes fechas de trasplante.

La aportación de la resistencia a Oídio y Nemátodos, más las conocidas a Spotted y L4 han sido decisivas para situar a Rijk Zwaan como el partner más competitivo

en gama orgánica para los cultivos de pimiento California. No son las únicas familias en la que Rijk Zwaan es competitivo en orgánico. La casa de semillas también dispone de soluciones en tomate rama, cherry suelto, cherry rama, cherry pera y cocktail con 12 variedades competitivas.

Cultivos al aire libre

La posición de Rijk Zwaan en ecológico no se centra sólo en cultivos bajo invernadero, sino que cuenta con un amplio panel en variedades en cultivos al aire libre en la familia de brásicas y hoja, con un portafolio inigualable de propuestas en escarola, canónigos, acelgas, iceberg, romanas, Open Heart Cos, cogollos, Romanas, ...

Rijk Zwaan ya dispone de las primeras gamas en orgánico con la propiedad Knox, que retrasa la oxidación de la lechuga procesada, lo que le permite un valor único en soluciones para las propuestas ecológicas de IV gama. Con todas estas propiedades, Rijk Zwaan dispone de más de 150 variedades aptas para la producción ecológica bajo la coordinación de Aureliano Cerrezuela.

Rijk Zwaan destina todos sus recursos humanos y talento al desarrollo y la transmisión de las soluciones y variedades ecológicas a los productores. Todo el equipo de desarrollo y comercial de Rijk Zwaan está preparado para asesorar y ofrecer la mejor respuesta a una propuesta de cultivo ecológico.

BIO
ORGANIC PRODUCTS

There is nowadays an increasing demand for organic products and we at Murciana de Vegetales, always at the forefront of innovation, are well aware of this. This reason, together with our permanent pursuit of customer's satisfaction, quality and the best service, has motivated us to grow organic products on those fields belonging to our company. Along the same line, we permanently seek to integrate productive processes increasingly respectful towards the environment, including organic control methods, into our farming activity.

Semillas para producción ecológica

Es la nueva gama de Fitó para la producción de hortalizas ecológicas. La nueva apuesta de Fitó para dar respuesta a la creciente demanda de los consumidores y al interés de los productores.

Estas variedades han sido cosechadas siguiendo el estricto cultivo ecológico con un proceso de obtención de semilla ecológica que cumple con todos los requisitos del reglamento ecológico.

ATENE0 F1

Tomate rama de calibre M-G de buen color y conservación y con grados Brix por encima de la media de la tipología. De excelente postcosecha para exportar sin problemas de calidad a los mercados más lejanos de Europa -Nórdicos, Alemania...-.

Planta vigorosa, entrenudo corto y raquis grueso y de color verde oscuro. Cuaja bien en épocas de calor como de frío.

HR

ToMV: 0, 1, 2 / TSWV / Fol: 0, 1 / Va / Vd

IR

TYLCV / Ma / Mi / Mj

AMALIA F1

Fruto semilargo con excelente consistencia y color negro muy brillante que goza de un estándar alto de calidad a la salida del invierno. La variedad goza de muy buena postcosecha para abordar mercados internacionales.

La planta es abierta, uniforme y de vigor medio y con escasa emisión de flores secundarias. Permite facilidad de cuaje a lo largo de todo el ciclo. Destaca por su gran producción en invierno.

CRISTAL F1

Fruto semilargo, de gran uniformidad y color negro brillante. La variedad goza de gran consistencia y mantiene su color oscuro a la salida del invierno.

La planta es abierta y de vigor alto y cuaja con facilidad a lo largo de todo el ciclo y se adapta bien a los ciclos largos.

NEREA F1

Berenjena de intenso color violeta y blanco marfil que mantiene la calidad durante todo el invierno y la uniformidad a lo largo de todo el ciclo. El fruto es semilargo y muy consistente.

La planta es abierta, vigorosa y de baja exigencia en mano de obra y gran facilidad de cuaje.

ENCINA F1

Pepino largo de verde oscuro y acanalado durante todo el ciclo de gran post-cosecha y excelente conservación.

La planta es vigorosa, de entrenudos cortos, manteniendo el estándar de calidad hasta final de ciclo y muy adaptada a siembras con calor.

IR CVYV / CYSDV / Px

MITRE F1

Pepino largo de fruto acanalado y verde oscuro. La variedad goza de la triple resistencia -CVYV, CYSDV y Px-.

La planta es rústica y adaptada al calor y no alarga el fruto en rebrote.

TEJO F1

Pepino largo de fruto color verde oscuro que destaca por su calidad y alta producción. Ofrece una planta de vigor medio con hoja oscura, pequeña y aireada y es de entrenudos cortos.

Destaca por su alta precocidad y con rebrote equilibrado dejando la entrada de luz. La variedad tiene buen comportamiento frente a enfermedades fúngicas.

IR CVYV / CYSDV / Px / Ccu

ROBLEO F1

Melón de piel semilisa de forma oval redondeada, que ofrece un color amarillo oro intenso y una fruta de 1,5-2 kilos por pieza. Carne blanca, firme y crujiente y muy jugosa en su maduración y muy buena postcosecha sin problemas de avinado.

Planta vigorosa, muy equilibrada y de buena sanidad con gran facilidad de cuaje. Trasplantes tempranos.

HR Fom: O, 1

IR Gc / Px: 1,2,3, 5

SOLEARES F1

Melón de fruto semiliso de forma elíptica-redondeada de color amarillo oro intenso. Ofrece carne blanca, firme y crujiente con buen nivel de azúcar.

Ofrece una planta semivigorosa, equilibrada y de fácil cuajado y alta producción.

HR Fom: O, 1

IR Px: 1, 2

BRILLANTE F1

Fruto de forma cilíndrica y color verde oscuro homogéneo de muy buena postcosecha.

Es una variedad muy precoz que cuenta con una planta de vigor medio, entrenudos cortos y porte erecto. El follaje es abierto para facilitar la recolección.

IR WMV / ZYMV / Px

TIZIANO F1

Calabacín de fruto recto y cilíndrico durante toda la campaña. Ofrece un fruto de color verde muy brillante.

Cuenta con un porte de planta abierta y entrenudo corto que facilita la recolección. La variedad ofrece un paquete de resistencias muy competitivo y también a Oídium.

IR CMV / ZYMV / WMV / Gc / Px

SF 1280

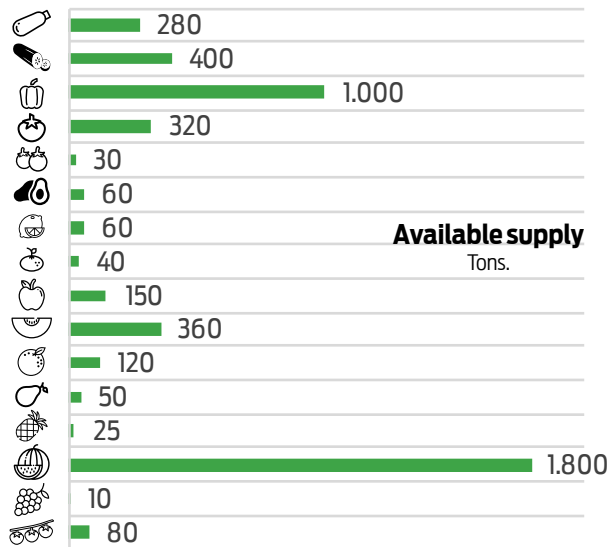

Mazorca cilíndrica de 18-20 líneas de granos muy profundos y muy buen acabado. Es una de las variedades más productivas del mercado en ecológico.

Ofrece una planta de altura media y de buena inserción de mazorca y es resistente al encamado.

STRENGTHS / NEWS

The quick commercial response as much as suppliers as customers that Organic Growers is giving is one of its main strengths with respect to its competition. This company located in El Ejido, one of the most important epicenters of the country with regards to fruits and vegetables production, offers to its customers a strategic positioning with which it is able to give a quick and direct service. In this line indeed, Organic Growers is in its element since they count on very organized and effective logistics.
